

Strategy Overview

As of 3/31/24

Dynamic Asset Allocation is a fully tactical investment strategy designed to generate long-term growth. The strategy utilizes a diversified basket of global iShares® ETFs across the asset class spectrum using global equities, global bonds, real estate, alternative investments, and cash equivalents. The strategy invests in growth assets in favorable market environments and scales to conservative assets such as cash or fixed income to preserve gains when bear market risk is high.

Primary Objective
Long-Term Growth

Secondary Objective
Downside Risk Protection

Active Management for a Changing Market

- People are living longer, and the road to financial security is only getting more complex. Investors require thoughtful solutions that properly balance the **financial tradeoff between income production and principal risk**.
- The rise of the Exchange Traded Fund (ETF) marketplace has provided NorthCoast with one of the tools necessary to deliver investment products designed to manage this tradeoff. Utilizing a variety of ETFs, NorthCoast can provide investors with **increased transparency, lower costs, and greater consistency**.
- Market exposure adjustments, rules-based ETF selection, and disciplined risk management are the key components to Dynamic Asset Allocation. Incorporating a hands-on tactical asset allocation solution can **enhance diversification, lower volatility, and generate solid, long-term income**.

Investment Process

Seeks long-term growth with downside risk protection through the implementation of a systematic 3-step process

Strategy Benefits

Dynamic Asset Allocation is a fully tactical investment strategy designed to generate long-term growth. The strategy invests in a diversified basket of global ETFs across the asset class spectrum using global equities, global bonds, real estate, alternative investments, and cash equivalents. The primary objective is long-term capital appreciation with secondary objective of capital preservation.

Benchmarks - World Allocation Avg - World-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. While these portfolios explore the whole world, most of them focus on the U.S., Canada, Japan, and larger markets in Europe. It is rare for such portfolios to invest more than 10% of their assets in emerging markets. These portfolios typically have at least 10% of assets in bonds, less than 70% of assets in stocks, and at least 40% of assets in non-U.S. stocks or bonds. Tactical Competitor Avg = Morningstar Tactical Allocation Category Average. Tactical Allocation portfolios seek to provide capital appreciation and income by actively shifting allocations between asset classes. These portfolios frequently have material shifts across equity regions and bond sectors. To qualify for this category, the fund must first meet the requirements to be considered in an allocation category. Next, the fund must historically demonstrate material shifts within the primary asset classes either through a gradual shift over three years or through a series of material shifts on a quarterly basis. The cumulative asset class exposure changes must exceed 10% over the measurement period.
